Examiner's Amendment

An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Amy Schmid on November 6, 2009.

The following amendments were discussed and agreed to by Applicant:

- 1) In claim 1, line 2, **delete** "." and **insert** ", wherein a molar ratio of the lidocaine to the etodolac is 1."
- 2) **Delete** claims 3 and 7.

Reasons for Allowance

The claimed invention of "an anti-inflammatory analgesic for external use comprising etodolac and lidocaine, wherein a molar ratio of the lidocaine to the etodolac is 1," is novel and non-obvious. The closest prior art is due to Lee et al. (US Patent No. 7,166,641). Applicants disclose that the penetratability and diffusivity in muscle tissues are unexpectedly improved together with skin permeability of etodolac, by adding lidocaine. Applicants have discovered that lidocaine works as a superior enhancer of the transdermal absorption of etodolac. On the contrary, Lee describes that a diclofenac salt of lidocaine is the preferred one in the various combinations of NSAID and a local

Art Unit: 1627

anesthetic. Further, Lee describes that diclofenac is replaceable with another NSAID, and ketorolac is preferred among these other NSAIDS. Contrary to the teachings of Lee, Applicants have discovered the specific combination of lidocaine and etodolac, which achieves unexpected results and superior results. Lee fails to teach or suggest this particular combination, or to recognize the superior effects resulting therefrom. Furthermore, Applicants have compared the enhancing effect of lidocaine on the transdermal absorption of etodolac with that of diclofenac or ketorolac. As shown in the enclosed Declaration of Mr. H. Hamamoto, the enhancing effect on etodolac-transdermal absorption is far more potent than the effect on diclofenac- or ketorolac-transdermal absorption. One of ordinary skill in the art would not have expected such an unexpected and superior result from the combination of lidocaine and etodolac, based upon the teachings of Lee. Thus the claimed invention is rendered neither anticipated nor obvious.

Conclusion

Claims 1 and 8 are allowed.
